

```
#include "BluetoothSerial.h"

#define RXp2 16
#define TXp2 17

BluetoothSerial SerialBT;
String device_name = "ESP32-BT";

void setup() {
  SerialBT.begin(device_name);
  Serial2.begin(115200, SERIAL_8N1, RXp2, TXp2);
}

void loop() {
  while (SerialBT.available()) {
    uint8_t c = SerialBT.read();

    // Forward everything from the app to STM32
    Serial2.write(c);
  }
}
```
